

## Is Eternal Youth Achievable?

**BY GREICE MURPHY,**  
CEO of Miami Stem Cell®

Want to Live Forever looking young? Science and not religion may hold the true key of eternal life. While the dream of eternal youth is as old as humankind, however, recent Regenerative Medicine treatment advancements in Stem Cell & Platelet Rich Plasma (PRP), are proving that stopping the aging process or at least significantly extending our longevity seem like a real possibility! As it turns out, the best kind of anti-aging treatment is inside one's own body and many people around the globe are taking advantage of it, exploring the latest in new treatment technologies, like genome mapping and undergoing Stem Cell & PRP procedures for a myriad of conditions.

Regenerative Medicine is the branch of medicine that develops methods to regrow, repair or replace damaged or diseased cells, organs, or tissues. This relatively new medical modality uses your natural physiology to “regenerate” your body at the cellular level, to ultimately make you feel and look younger, stronger, and healthier with fabulous glowing skin, hair and even restored joints! What if you could look and feel like you were young for the rest of your life? If you could live not just longer, but with your strength, vigor, and beauty intact?

Thanks to modern science, we now know that the “the cure is within” and the secret to eternal youth and eternal good health is inside of our own cells, so why not use them to heal and rejuvenate us?

PRP and Stem Cells treatments have been commonly used to

treat pain related conditions, however, beauty enhancements and hair regrowth are other areas that have been revolutionized by Regenerative Medicine and particularly using your own PRP. If you think using cosmetic treatments to heal the skin sounds extraordinary, then wait until you hear what PRP can do for you! Reducing the appearance of wrinkles and age lines, as well as even promoting hair growth. With our new PRP treatments, your skin and hair can often be restored to their youthful state without the need for invasive surgeries.

You may have heard about Platelet-rich plasma (PRP) treatments to treat a range of skin and thinning / loss of hair type issues. But we must caution that not all PRP are the same and using the most advanced technological techniques can make a huge difference with the results.

Note that not all PRP is equal, and it is best practice to ask clinics about their PRP concentration before signing up for their treatments. A therapeutic dose should concentrate the PRP to over 1 billion platelets per mL, of which is over 10X the whole blood concentration.

At Miami Stem Cell, we measure the quality of our PRPs using a process called PRP Analysis and Characterization (PAC). It provides a complete hematological composition of our PRP samples

so we can correlate platelets and cellular composition to patients' clinical outcomes. Our PAC and quality control differentiates our clinic from others demonstrating the PRP metrics to patients.

Furthermore, we are in the process of developing a new state-of-the-art PRP protocol (available in early 2023) that will basically revolutionize the beauty industry! This breakthrough technology will allow PRP to be delivered through a new microneedling pen that will attach the syringe containing your concentrated plasma directly to the pen delivering this gold liquid through the needles deeply into the epidermis painlessly. That means the PRP will be injected deeper through the skin versus using the microneedling pen to perforate the skin and manually applying the PRP on the skin (current usage/application). This is game changer!

While celebrities were initially ahead of this regenerative beauty trend, our new treatment modalities are now readily available, affordable and even financed with no extra cost for our patients, thus making it possible for basically everyone to have access to these new non-invasive Regenerative Treatments.

In conclusion, doctors agree that both PRP & Stem Cells treatments are pivotal components of chasing youth, not just for non-invasive pain treatments, but also for beauty and hair enhancements. So, if you are looking for the secret to this “fountain of youth”, let our experts show you the remarkable things that can be accomplished by simply awakening ‘sleeping’ stem cells & PRP in your own body!
